**Doctor's New Book Informs Parents about Vaccine Risks**

SAN JOSE, CA - Mar 23, 2010

Parents who want to educate before they vaccinate can now have one of the most complete manuals on vaccine risks available today - *Vaccination Is Not Immunization* 2010 (Paperback or E-Book) by Dr. Tim O'Shea.

The book is rewritten every year to include the new events and new vaccines that have been added within the past year, many of which have been kept completely out of media.

Though easy to read, the content is disturbing, and very difficult to dispute. Every fact and statistic is meticulously documented. The book makes crystal clear what every responsible parent should know:

- \* the absence of proof of safety
- \* problems with individual vaccines: HPV, polio, hepatitis B, flu, Prevnar, swine flu, etc.
- \* what the manufacturers really put in vaccines
- \* the true rates of death and permanent physical damage from vaccines
- \* the real connection with the autism epidemic
- \* the only country on earth with 68 vaccines for kids
- \* the huge money behind vaccines
- \* how the rising figures of vaccine-damaged kids are hidden
- \* how vaccines contribute to the skyrocketing of learning disabled and disturbed children, who then become new markets for psychoactive drugs

Most of the endorsements of the new book are from medical doctors who have the courage to admit that vaccines deserve a closer look, especially by those who have children.

“Every new mother and father should have the opportunity to read *Vaccination Is Not Immunization* before subjecting their children to mandatory vaccinations.”

- Kilmer McCully, MD *The Heart Revolution*

“*Vaccination Is Not Immunization* is the most well documented analysis of the vaccination cult of modern medicine. Be informed of the dangers, and lack of scientific proof of immunity. As the best source for public and professionals, I highly recommend [the book].”

- William Deagle, MD - GCN syndicated radio
